Subject: Marion Lagoon, WWTP, and Rice Creek

Attached are the analytical results of sampling at the Marion lagoon, WWTP and Rice Creek. These results confirm that the discharge has a reasonable potential to cause or contribute to an exceedence of the water quality criterion for Arsenic (0.0003 mg/L) and support the need for modification of the Marion WWTP NPDES Permit No. AL0023809 referenced in my letter to Trey Glenn dated November 18, 2009.
